

Project Design Phase
Solution Architecture

Date	26 June 2026
Team ID	
Project Name	Leave Approval System
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture defines how the **Leave Approval System** is designed and implemented to address the organization's leave management requirements. It bridges the gap between business needs and the ServiceNow technology platform by providing a structured approach to designing, developing, and deploying the application.

Its goals are to:

- Design an efficient **Leave Approval System** that automates leave request submission, approval, rejection, and status tracking.
- Describe the overall architecture, components, workflows, and data flow of the application for project stakeholders.
- Define the user roles (Employee, Manager, and Administrator), application features, workflow automation, and system requirements.
- Provide implementation guidelines for developing, managing, and maintaining the solution using the **ServiceNow** platform.
- Ensure secure, role-based access control, centralized leave record management, and automated email notifications.
